Recycled Aggregate Solutions

In recent years we have invested heavily in our crushing and screening process to ensure that we can provide the best recycled aggregate to the industry.

<p>Hardcore</p>	<ul style="list-style-type: none"> • Consists of concrete, bricks and stone from the construction, demolition and building industry. We collect the raw material in our tippers and skips, and our customers can bring it in with their own transport. This is the raw material that generates our recycled products. • Ideal to be used for rough tracks, farm roads, landfill site haul roads etc • Size subject to nature of raw material on stock.
<p>70mm –dust, 3” down, 6F2</p>	<ul style="list-style-type: none"> • Consists of crushed hardcore (brick and concrete) screened and graded to a maximum 70mm size and blended with recycled fines to aid compaction. Material is suitable for making up ground, piling mats, unadopted road sub base, and can be used a lot in wet weather on construction sites to keep the ground firm. • A good all round material can be used for virtually any job.
<p>40mm-dust, type 1, 6F1</p>	<ul style="list-style-type: none"> • Our type 1 graded recycled product consists of crushed brick and concrete screened and graded to a 40mm – dust. • Suitable for use as a sub base for roads, car parks, paths, and shed/housing/garage bases. • This contains fines so when compacted it binds together.
<p>70-40mm single size, 70mm clean aggregate</p>	<ul style="list-style-type: none"> • Made up from Crushed concrete and brick. Screened and graded to a maximum 70mm size and a minimum 40mm sieve. • No fines content in the produce therefore ideally suited to be used on wet ground or for drainage layers
